

Hertie's 2026 R Bootcamp

Linus Hagemann

Welcome

I'm [Linus Hagemann](#).

- 2nd-year MDS student & IDS TA
- PY at the German Ministry for Economic Affairs and Energy
- Computer Science & Software Engineering Background

Housekeeping

This will be (partially) recorded.

Who are you?

Bootcamp Overview

- two-day workshop, 9AM-4PM, with breaks and lunch

Goals

- become familiar with `R` and `RStudio`
- learn to “think like a (R) programmer”
- learn and practice the most important programming concepts that we’ll use throughout the semester

Housekeeping

This is a (wholesome) learning environment. 🐳

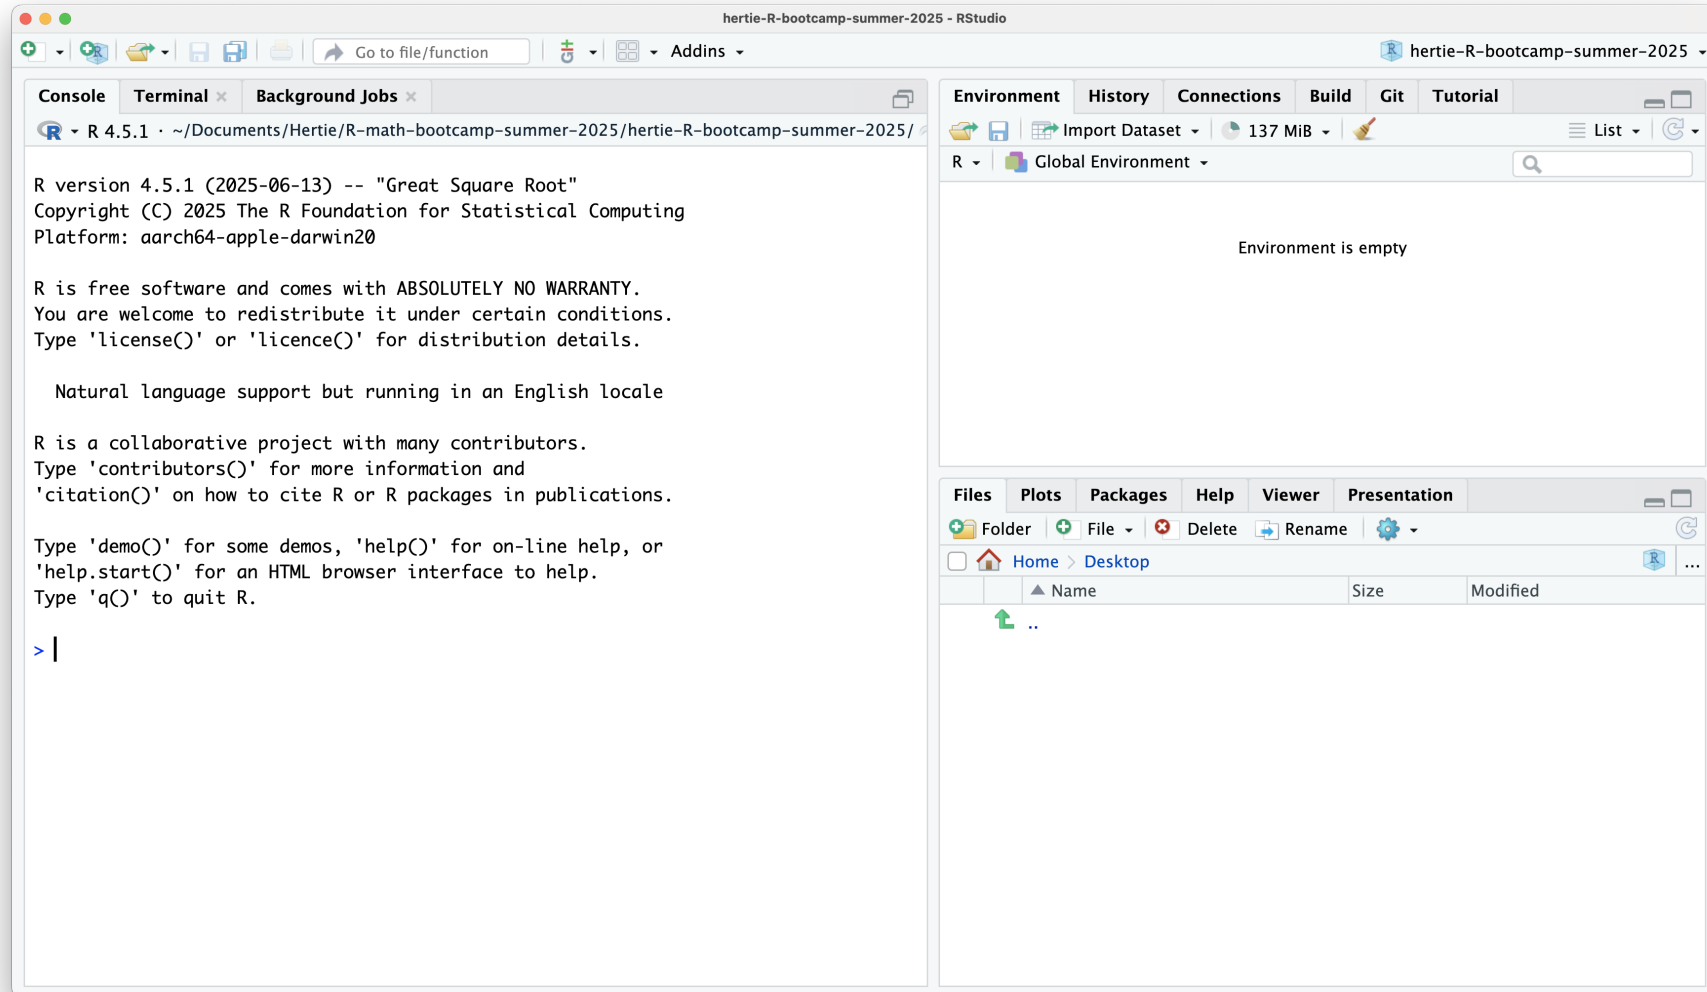

This is **for you**. Make the most of it.

R and RStudio

R is a programming language designed for statistical computing (data analysis, statistics, machine learning, and data visualization).

RStudio is an integrated development environment (IDE) for data-work with R.

Opening RStudio

What RStudio looks like when you first open it.

Opening RStudio

The screenshot displays the RStudio interface with four main panes highlighted by red boxes:

- Source:** The top-left pane shows the R script editor with the following code:

```
1 library(ggplot2)
2 mpg_plot <- ggplot(mpg, aes(x = displ, y = hwy)) +
3   geom_point(aes(colour = class))
4
5 mpg_plot
6
```
- Environment:** The top-right pane shows the Environment tab with a table of objects in the Global Environment:

Name	Type	Len...	Size	Value
mpg_plot	gg	9	29.1...	List of 9
- Console:** The bottom-left pane shows the R console output:

```
> library(ggplot2)
> mpg_plot <- ggplot(mpg, aes(x = displ, y = hwy)) +
+   geom_point(aes(colour = class))
>
> mpg_plot
>
```
- Output:** The bottom-right pane shows the Plots tab with a scatter plot of highway mileage (hwy) versus engine displacement (displ), colored by car class. The legend indicates the following classes: 2seater, compact, midsize, minivan, pickup, subcompact, and suv.
